BWI Instagram Content Analytics [*2025 - 2026*]

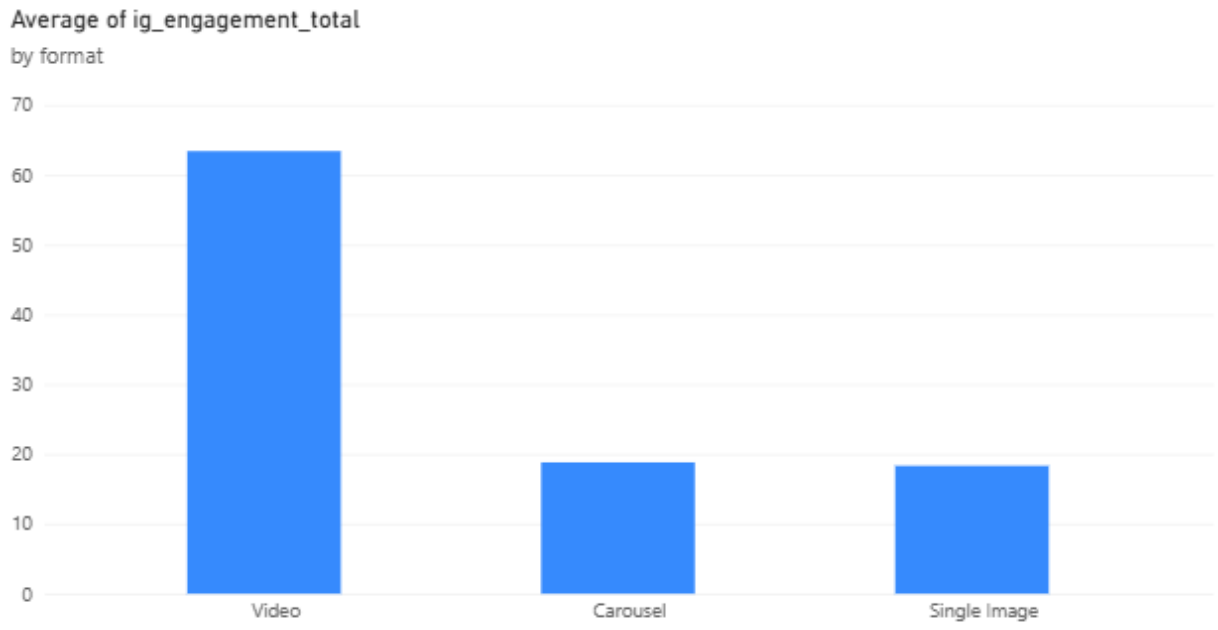

By *@Wiraatmaja*

This analysis covers 390 Instagram posts from BWI's official account, spanning February 2025 to September 2026. The dataset was flattened and cleaned entirely in SQL (DuckDB) from the team's monthly logging sheet, including correcting several date-entry errors (two monthly blocks had been logged a month off, and four recent posts were mislabeled by one month) before any trend below was calculated.

1. Format Performance

Video posts clearly outperform. Across 390 posts (189 Video, 189 Carousel, 12 Single Image), Video drives both the highest average reach and the highest average engagement, by a wide margin.

Format	Posts	Avg reach	Avg engagement
Video	189	1,699	63
Carousel	189	491	19
Single Image	12	414	18

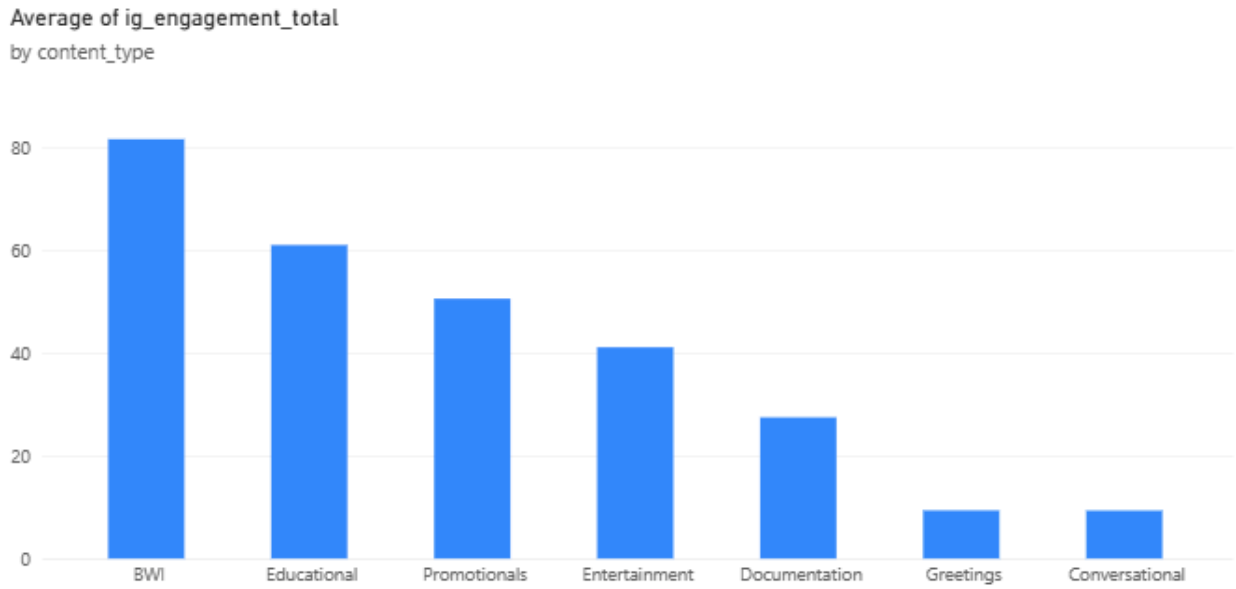

Power BI Overview page

Recommendation: default to Video when reach or engagement is the goal; reserve Carousel for content that genuinely needs multiple images rather than as a default format.

2. Content Category Performance

Educational is the most reliable top category once sample size is accounted for (a post can carry more than one tag):

Category	Posts	Avg reach	Avg engagement
BWI	7	1,153	82
Educational	65	900	61
Promotionals	157	1,808	51
Entertainment	21	913	41
Documentation	146	493	27
Conversational	3	235	9
Greetings	25	174	9

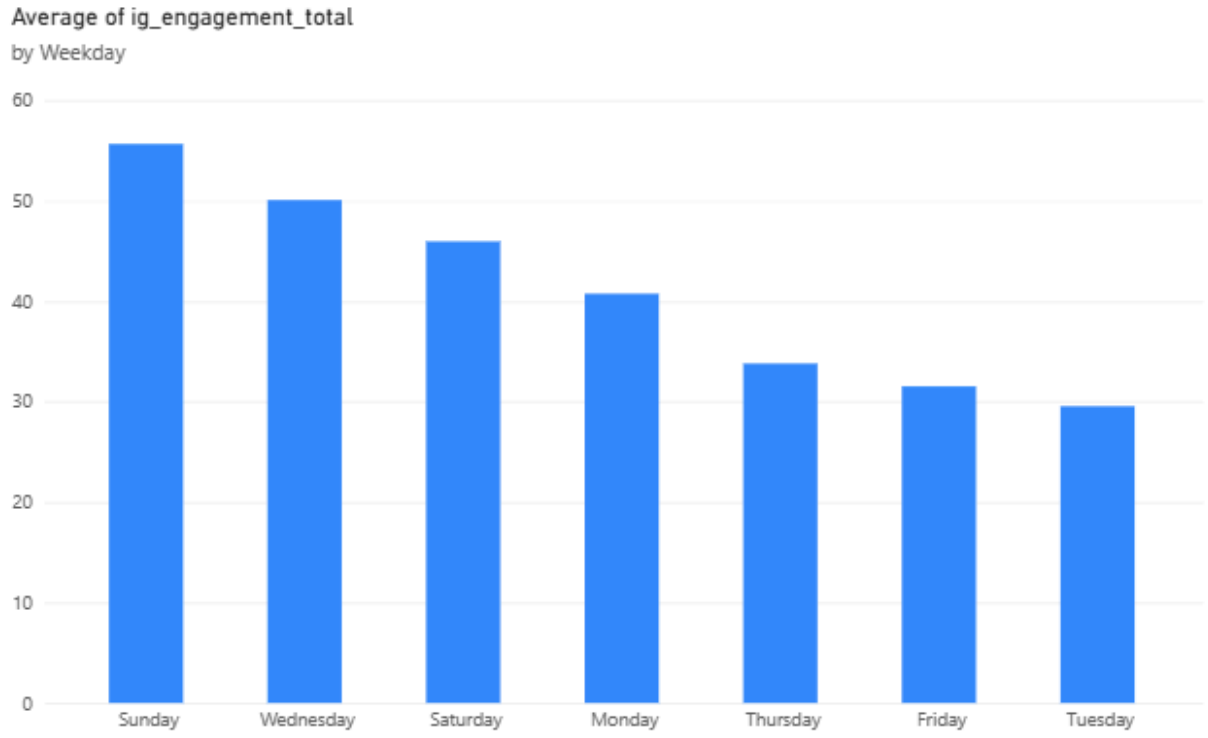

Power BI Overview page

`BWI`-tagged posts score highest numerically but on only 7 posts, too small to act on. With a trustworthy sample, Educational leads. Promotionals reaches the most people (*1,808 avg reach, the highest of any category*) but converts that reach into engagement less effectively.

Recommendation: lean further into Educational content for engagement; use Promotionals specifically for reach/awareness goals, not as the primary engagement driver. Incorporate educational elements for promotional campaigns / videos to drive more engagement.

3. Posting Schedule

Weekday	Posts	Avg reach	Avg engagement
Sunday	39	648	56
Wednesday	60	836	50
Saturday	51	1,067	46
Monday	71	1,094	41
Thursday	55	876	34
Friday	57	1,425	32
Tuesday	57	1,425	30

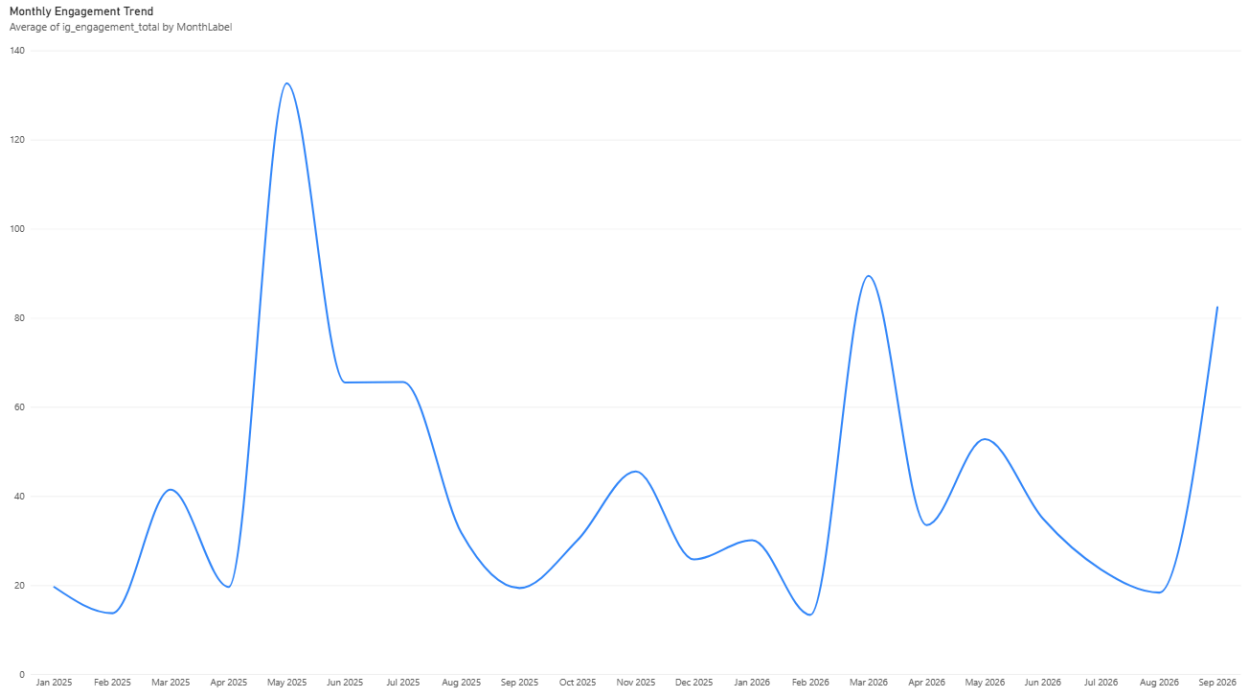

Power BI Overview page

Sunday has the fewest posts of any day (39) but the highest average engagement (56). Tuesday and Friday get the most reach (1,425 each) but convert it into comparatively weak engagement.

Recommendation: shifting some posting volume toward Sunday, even at the expense of Tuesday/Friday volume, may raise average engagement without requiring more content.

4. Monthly Trend

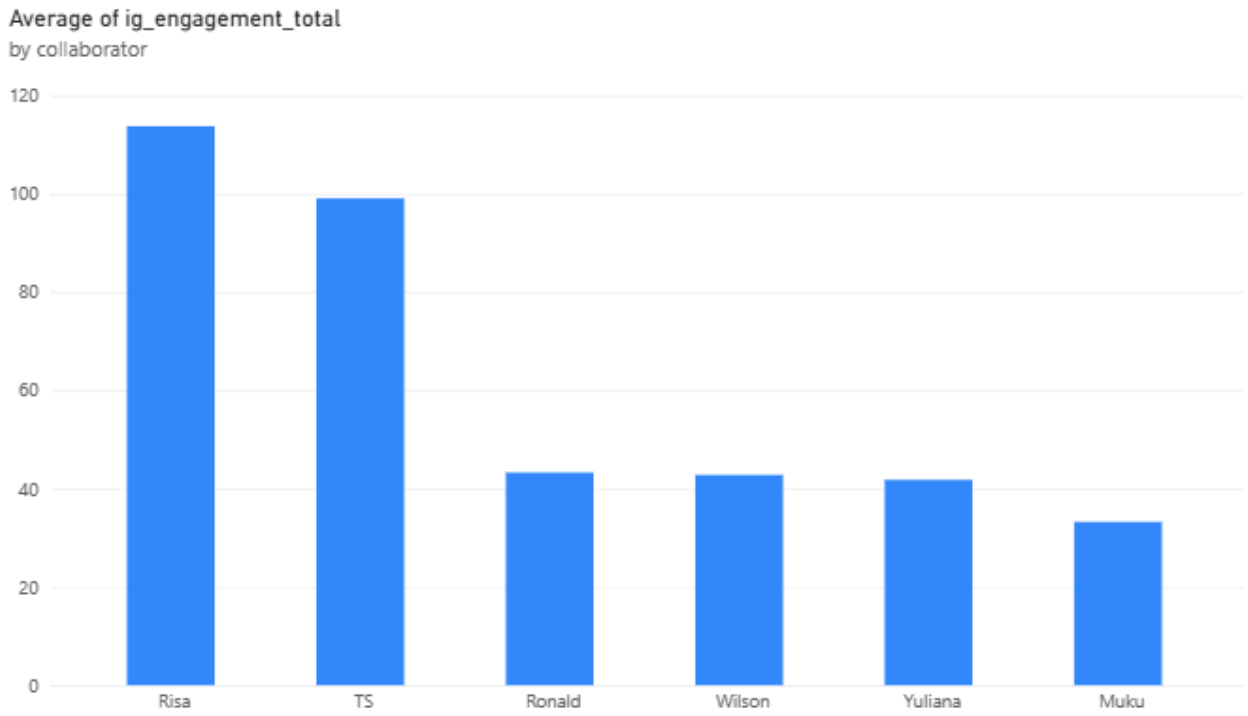

Power BI Monthly Trend page

The swing (*commonly ±60 to ±110 month to month*) suggests performance is driven by individual standout posts and collaborations rather than gradual audience growth.

5. Collaborator Performance

Collaborator names were extracted from post titles (*e.g. "Collab w/ TS"*) and normalised across spelling variants. Among collaborators with a reliable sample (5+ posts):

Collaborator	Posts	Avg reach	Avg engagement
Risa	7	2,295	114
TS	25	3,721	99
Wilson	6	680	43
Ronald	26	1,247	43
Yuliana	6	1,059	42
Made Muku	8	627	33

Power BI Overview page

Risa and TS are the standout collaborators. Ronald is the single most frequent collaborator (26 posts) but performs well below Risa and TS, confirming that frequency of collaboration doesn't equal impact.

Recommendation: prioritise TS and Risa for future collabs where engagement is the goal; TS's large sample (25 posts) and high reach (3,721 avg) also make it the most dependable choice for awareness-driven collabs.

6. Recommendations

The charts above are from the companion Power BI report (*BWI Instagram Performance Report*), built on the same cleaned dataset and confirming every finding below.

1. **Focus format mix toward Video.** When the focus is reach and engagement Video is the best bet, It outperforms Carousel and Single Image on both reach and engagement by a wide margin, regardless of content category.
2. **Lean into Educational content** as the primary engagement driver; use Promotionals deliberately for reach/awareness, not as the default engagement play.
3. **Test shifting some posting volume to Sunday**, which currently gets the fewest posts but the highest average engagement of any day.
4. **Prioritise collabs with Risa and TS** over higher-frequency, lower-impact collaborators like Ronald.
5. **Don't read month-to-month dips as decline.** Performance here is driven by individual standout posts rather than gradual audience growth, so a single low month isn't necessarily a trend.
